Poster Recommendations

Location

Posters should be placed in locations where doors are frequently mislocked, in which they greatly impact mobility, in a manner that adds one or more of the following impacts:

1. Mobility Users have to travel more strenuous distances to their destination
2. The door is one of three, or less accessible doorways to the common area, or area of most traffic. (Such as Science Library doors.)
3. In Winter, or harsh weather conditions, the locking of said door can greatly increase the risk of students or staff getting a preventable illness, or injury (Such as slipping on ice.)

Posters should be placed in a manner that allows them to stand-out, but also not in a manner that makes them more noticeable in a fashion that could result in their premature removal.

Varient Mixing

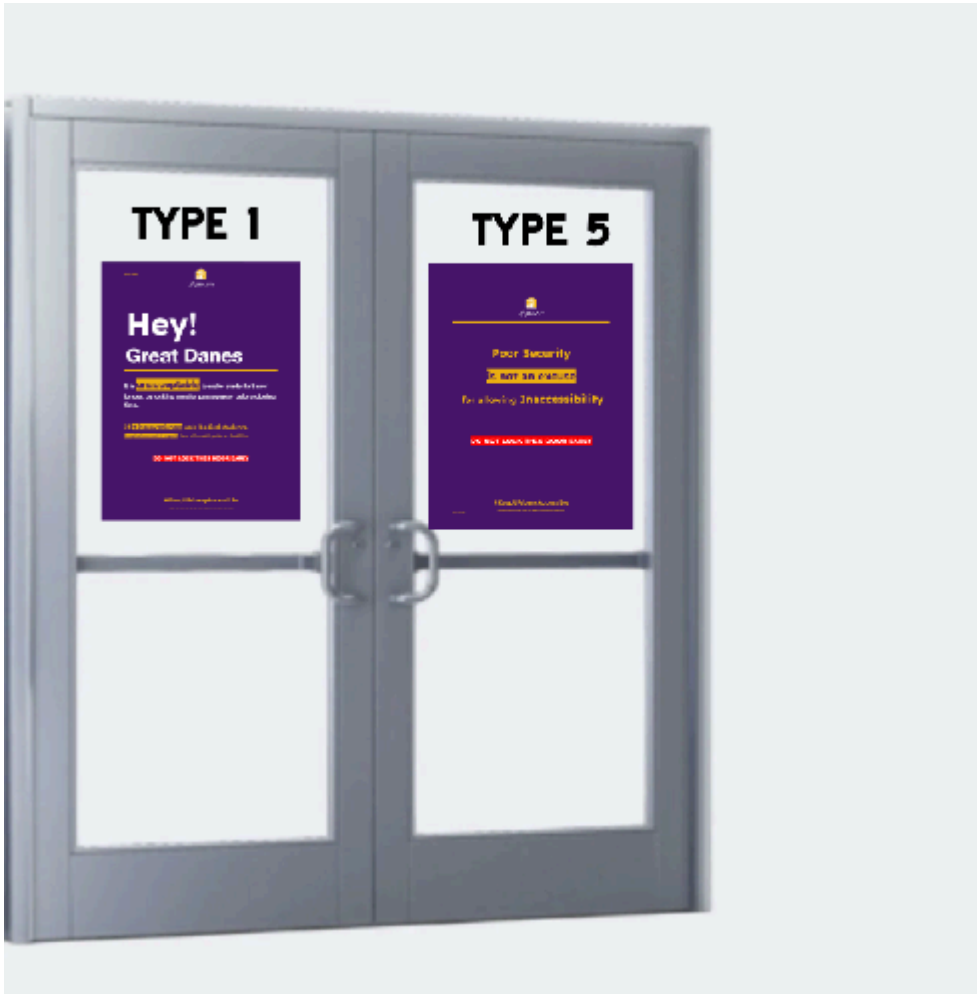

Each Poster has a style identifier either within the top left corner, or bottom left corner.

Variants 1, 2, 3 and 4 are intended to be standalone posters, within their intended area.

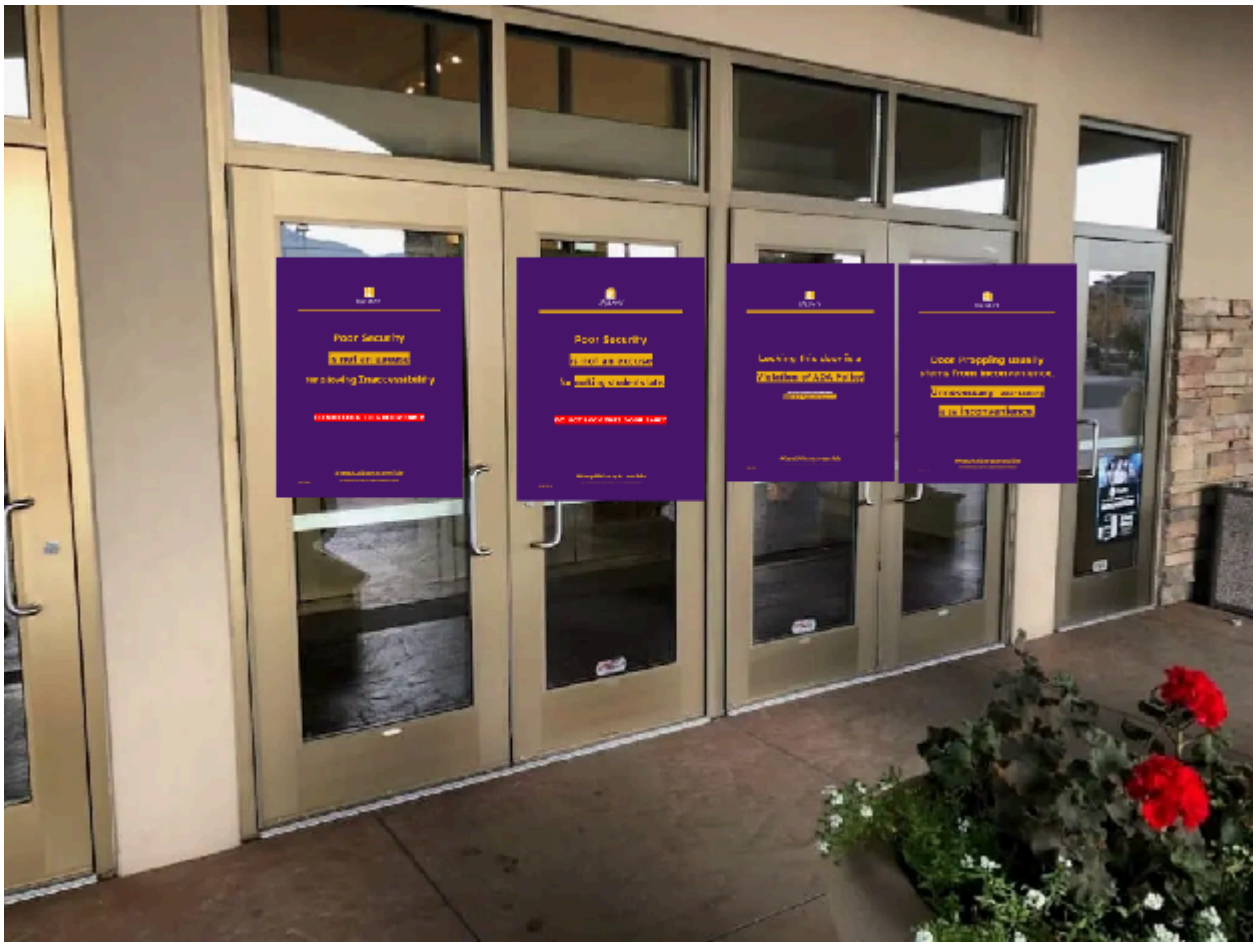

Variants 5, 6, 7 and 8 are attention-grabber posters intended to be placed on separate doors **within the same area** or on both sides of a standalone variant.

Ideally:
one standalone poster per door face, for standard doors.
One standalone poster per center door face, and one attention-grabber on each face, per every other door frame.

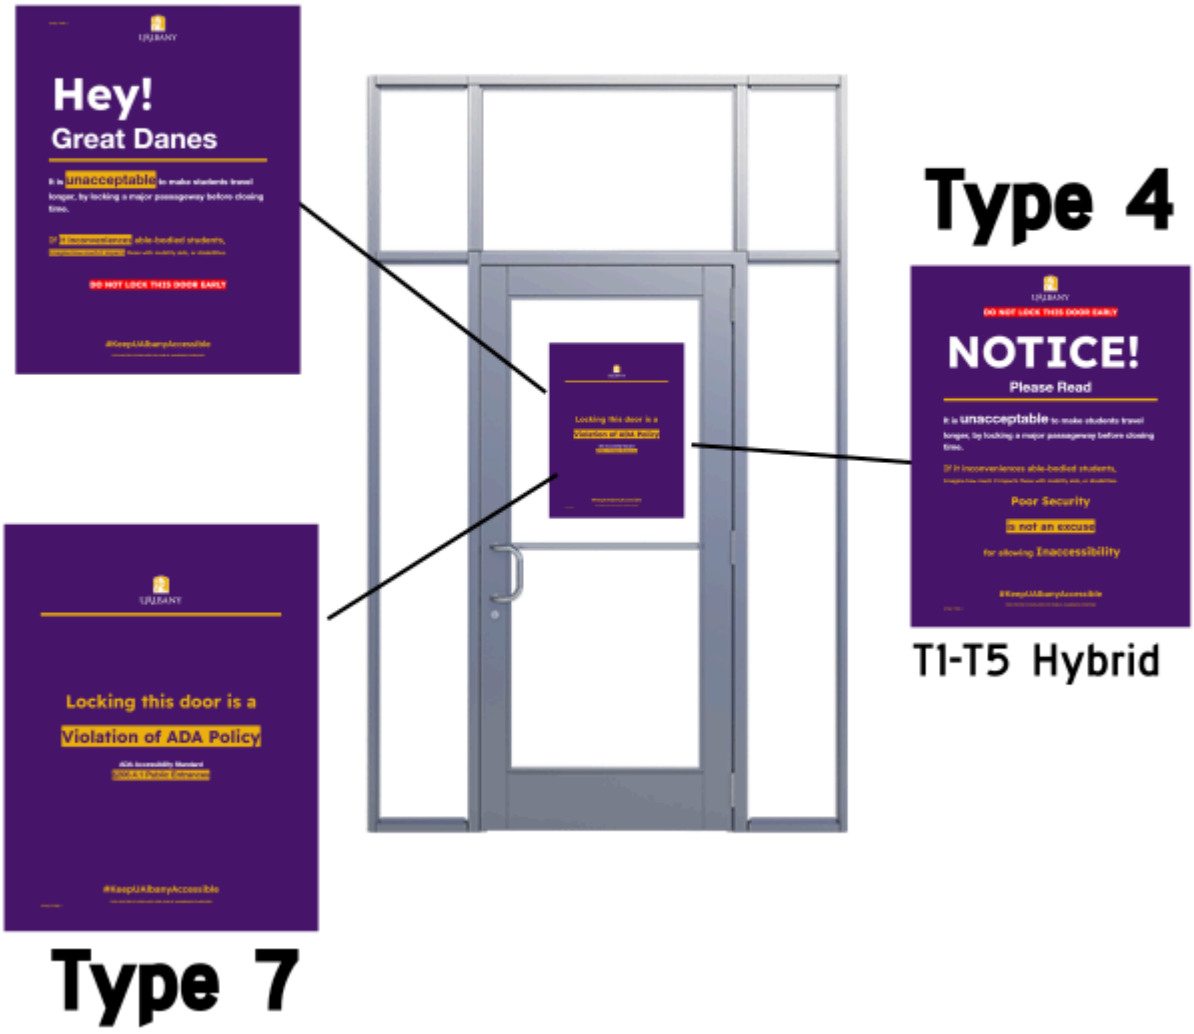

EXAMPLES

TYPE 1
Hey!
Great Danes
TYPE 5
